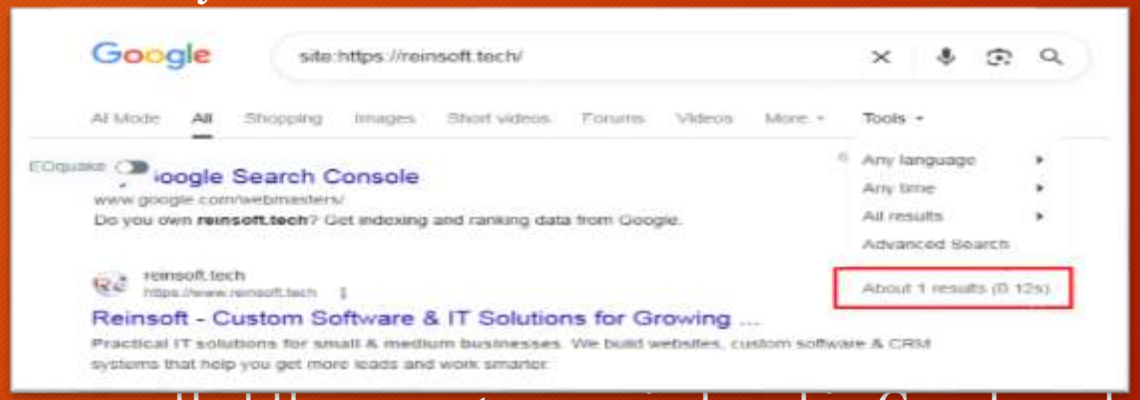
Basic SEO Issues in Website

Date- 11 March 2026

https://reinsoft.tech/

Website Indexing

- Indexing means if the website pages have been crawled and indexed in search engine (like Google). With Site operator we can check how many pages are approximately indexed in Google search.
- Indexing is the process by which search engines organize information before a search to enable super-fast responses to queries. Searching through individual pages for keywords and topics would be a very slow process for search engines to identify relevant information.



While checking the website we see that there are 1 **page** indexed in Google make sure that indexing is not blocked for any important pages or there is some technical issue that is preventing it from getting indexed.

Title Tag

- A title tag is an HTML element that specifies the title of a web page. Title tags are displayed on search engine results pages (SERPs) and have important role in the ranking algorithms.

  Title tags are important for various reasons. Title tags are a major factor in helping search engines understand what the page is about.

  Title on Home Page -

Title 64 characters	Reinsoft - Custom Software & IT Solutions for Growing Businesses

There is title on home page, it can be not optimized for the important keywords, so it is recommended to optimize it accordingly.

Meta Description tag

- The Meta description is an HTML attribute that provides a brief summary of a web page. Search engines such as Google often display the Meta description if it is relevant to the search query.
- Meta descriptions are important because they're typically the first encounter that a user has with your site when they perform a Google search and, with all that competition, first impressions do count.

Meta Description on Home Page -

Description 149 characters	Practical IT solutions for small & medium businesses. We build websites, custom software & CRM systems that help you get more leads and work smarter.

Meta description is found on home page. it is good from SEO point of view.

Headings

- Heading tags H1, H2 etc. are important part of a web-page and plays important role in the ranking algorithm.
- Header tags are important for SEO because they help Google understand your content, but also because they make your page more user-friendly – by making your content more readable and accessible.

Headings on Home Page –

H1	H2	H3	H4	H5	H6
1	8	23	9	0	0

- There is 1 h1 tag found on this web site. it is good from SEO point of view. But H2 tags are defined.

All headers in order of their appearance in HTML.

<H2> Our Simple & Effective Process

As we checked the website home page and H1 tag Not found there. Only H1 tag should be present in every page. H1 tag should be not optimized according to our services also. There are other heading tags like (h3, h4 etc.) but need to optimize it more for the better results.

Canonical Tag

- A canonical tag is a way of telling search engines that a specific URL represents the master copy of a page. Using the canonical tag prevents problems caused by identical or "duplicate" content appearing on multiple URLs.

URL	https://reinsoft.tech/
Canonical	https://reinsoft.site/

As we Checked the Canonical tag of the website as well and we have not found an issue with the canonical tag.

Sitemap.xml

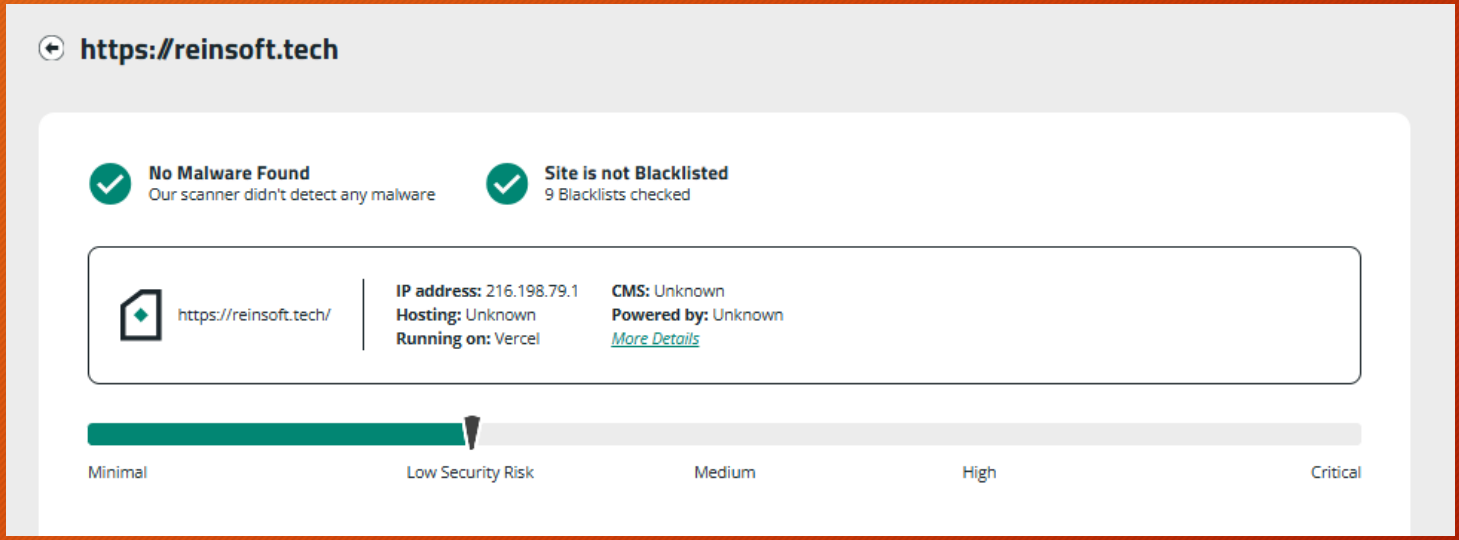
- Sitemap informs search engine about available for crawling. A Sitemap is an XML file that lists URLs for a site along with additional metadata about each URL.

We have checked your website and there is sitemap. We will check this during detail analysis for better results and crawling.

Check Securi check

- We first of all check the website in the tool Sucuri, to check for any malware or website blacklisting issue.

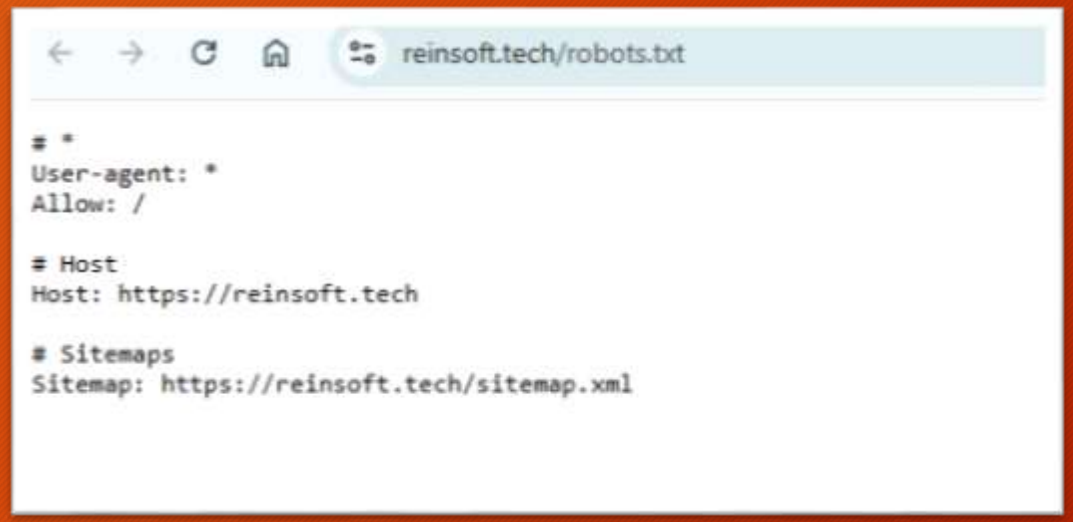
URL - https://sitecheck.sucuri.net/results/https/reinsoft.tech



While checking the website We have found issue on the website.

Robots.txt

- The robots.txt file, is a text file that tells web robots (most often search engines) which pages on your site to crawl and not to crawl. It is recommended to have optimized robots.txt file update in the root folder of the website.



We have found robots.txt file in the root folder. There is sitemap file as well. We will check this during detail analysis.

Content Optimization

- Content is king in SEO and it plays and important role in SEO. You should use unique keywords-oriented content in the web pages. When your web pages having the unique keywords oriented informative content then chance of getting the ranking of your website will be better.

- Content optimization is important because it ensures search engines and users can understand your content easily. The benefits of content optimization are high quality, search engine-friendly content that is easy to use and easy to find.

As we have checked some of pages in your website have less content. so, we suggest you please use optimized content in your website for increase the online presence of your website.

Img ALt Tag

- Your webpage is using "img" tags with "alt" attribute. This is good from SEO point of view. It is recommended to use “img” tags with “alt” attribute for better results.

IMAGES	without ALT	without TITLE
19	0	19

Remark – 19 Images on Home Page, without Alt tag & 19 without Title

There might be more SEO issues in the site that we can find and try to resolve if you allow and give us a chance to work with you. We will be waiting for your kind response…

Thank You
